

LISHAI

Yitzchak Rabin High School
Kiryat Yam, Israel

WHEN I STARTED HIGH SCHOOL, I NEVER EVEN DREAMED THAT ROBOTICS AND PHYSICS WOULD BE AN OPTION FOR ME, OR WHETHER IT WOULD BE SOMETHING I EVEN ENJOYED. WHEN I TRIED IT, I IMMEDIATELY FELL IN LOVE WITH THESE SUBJECTS.”

I study robotics and physics at Rabin High School. I learn at a high level in these classes, and the way we learn involves hands-on interaction instead of just reading from a book. I am able to understand and apply what I learn because I have the chance to build, create and bring these subjects to life in class. It helps me to absorb the topics better as a result.

I have a 95% cumulative GPA, and because of my high grades, I earned a prestigious academic scholarship. The scholarship is awarded to a select number of students from northern Israel who have achieved excellence in technology. Recently all of the scholarship award recipients came together and we had the chance to work on a project using 3D printers. It was such a cool experience.

No one in my family works in technology or science, but everyone in my family is very proud of me for what I have accomplished at school. I want to be an engineer when I grow up. I want to keep my options open for which field of engineering I go into, but I realize there are so many possibilities.

World ORT Kadima Mada has changed my life. When I started school, I never even dreamed that robotics and physics would be an option for me, or whether it would be something I even enjoyed. When I tried it, I immediately fell in love with these subjects. I made the right decision in choosing this study track, and I am grateful to my teachers for encouraging me every step of the way. I am happy!
